Abstracts

The Europe Smart Dishwasher Market would witness market growth of 14.1% CAGR during the forecast period (2020-2026).

A smart dishwasher is one of the smart home appliances that brings enhanced capabilities to the traditional dishwasher, such as Wi-Fi access, as well as convenience options like mobile controls and voice controls via a virtual home assistant. Smart dishwashers are highly effective and versatile and are proven to tackle common problems, including the repositioning of food particles on plates or dishes.

In addition, the enhanced technology features of the smart dishwasher allow users to integrate their dishwasher into a smart home design. The increasing demand for kitchen appliances with features such as the convenience of remote control, as well as the unique experience they provide, is likely to boost demand for smart dishwashers over the forecast period. Globally, changing lifestyles and rising disposable incomes are contributing to home renovation and home remodeling initiatives aimed at revamping the conventional household structure.

Growing home values have doubled the equity of the homeowner in the last five years. This indicates the propensity of homeowners to feel richer and more likely to spend money on home improvement. The growing importance of kitchens as a focal point in every home has led consumers to renovate and decorate their kitchens according to the latest trends and smart items. The tendency of consumers towards technical advances coupled with increasing social dynamics has led to the emergence of modern kitchens.

Such factors are expected to boost demand for smart dishwashers over the forecast period.
