Software-defined data center (SDDC) is basically a software based data storage system where resources such as storage, networking, and security are combined and provided as a software service. SDDC offers a highly secured platform utilizing web-based servers to deliver data in an effective manner, and enable access to information by virtualization and cloud technology. Rapid rise in the number of online shoppers has given rise to unprecedented growth within the e-commerce business. Attractive offers, easy payment methods, wide range of options, and ease of shopping has made the online platform a very attractive mode of shopping, eventually driving the e-commerce industry. Due to rising inclination to shop online, the data generated is enormous and needs to be processed and stored in data centers. The need for highly robust infrastructure would make data centers a costly venture. Other industries including telecom & IT, BFSI, and manufacturing have also been keenly exploring storage systems and high performance computing options.
