Abstracts

The Europe Surgical Lights Market would witness market growth of 5.4% CAGR during the forecast period (2020-2026).

Surgical lighting accessories can be used to supplement or attach to the surgical lighting system after it has been initially purchased and installed. Accessories that cover a multitude of different items, but some are typically available with the purchase of a surgical lighting system. Crucial features can include (but are not limited to) the ability to attach ambient light to a surgical light mount, the ability to add a stand-alone camera for recording and/or teaching purposes, the ability to add a single or dual display mount, or the ability to add a radiation shield. Other accessories can include sterile light handle covers that can be used to preserve a sterile environment where a surgeon still has control of the position, intensity, and spot size of the light from the light handle.

The Operating Room (OR) must be fitted with technologically sophisticated equipment that provides improved operating efficiency to allow surgeons and other healthcare professionals to be more versatile and easy to handle. They need to be fitted with appropriate instruments and facilities to ensure quality patient care and increased operational efficiency. High-quality surgical lighting help plays an important role in the success of complex procedures.

As OR and surgical procedures tend to become more advanced, technical developments have also led to the development of customized lights that fulfill different standards, based on the type of operation and the OT specifications and measurements.
