Abstracts

The Europe Teleradiology Market would witness market growth of 16.89% CAGR during the forecast period (2019-2025).

Teleradiology applications include teleconsultation, telemonitoring, and telediagnosis. These applications assist radiologists in performing their work efficiently. Teleradiology ensures global and real-time analysis of on-site applications through remote access via the cloud network. The high prevalence of long-term diseases including breast cancer, osteomyelitis, and cellulitis, and increasing numbers of emergency cases in less developed regions are anticipated to further push the market.

It has also been anticipated that the adoption of favorable government initiatives, like guiding radiologists to provide diagnostic imaging services, would fuel demand. For example, a registered charity, the Royal College of Radiologists, seeks to provide advice to radiologists about improving their training and providing specialized radiological services. Likewise, payment of funds by government agencies to buy enterprise imaging systems in countries such the U.K. is also projected to support market development.

Teleradiology service providers help to fill the requirement for subspecialty specialists, vacation breaks, and excess gaps in on-site radiology facilities. Shortage of radiologists, higher adoption of advanced imaging technologies with big data files, integration of hospitals into local delivery systems, along with high patient expectations are prominent factors that pace up the market's growth.

Based on product the market is segmented into X-Ray, Magnetic Resonance Imaging (MRI), Computed Tomography (CT), Ultrasound and Nuclear Imaging. Based on countries, the market is segmented into Germany, UK, France, Russia, Spain, Italy, and Rest of Europe.
