Abstracts

The Europe Tilt Sensors Market would witness market growth of 8.1% CAGR during the forecast period (2019-2025). Over the forecast period, the market has seen steady growth due to increased demand from automobiles, smartphones, ships, laptops, gaming consoles, and manufacturers of land-based satellite communication devices for these devices. In addition, the construction, mining, agriculture, transportation, and industrial automation sectors are projected to increase demand. These are a few important reasons that are expected to improve market growth prospects over the forecast period.

A tilt sensor generates an electric signal with an angular motion and it is used with a finite range of motion to calculate slope. Manufacturers of construction equipment now recognize the importance of using tilt sensors to prevent serious harm at construction sites. Such devices are specifically used in scissor lifts, telehandlers, boom lifts, and aerial work platforms (AWPs) for proper monitoring of tilt angles at construction sites and preventing mishaps like collisions, falling, entrapment, and overturning of cranes. Such devices help monitor the tilt angle of the chassis, the tilt angle of the platform, and the height of the platform of a range of heavy machinery used on construction sites.

Based on Material Type, the market is segmented into Non-Metal and Metal. Based on Technology, the market is segmented into MEMS, Fluid-filled and Force Balanced. Based on Application, the market is segmented into Construction & Mining, Automotive & Transportation, Aerospace & Defense, Telecommunications and Others.
