Abstracts

Unified threat management (UTM) as a solution, has a framework that can significantly cut equipment cost and eventually reduce administrative efforts by combining several security features into one appliance. Cost and integrated solution made Unified Threat Management solutions an attractive alternative. Nevertheless, consolidation of several security tools into a single network device has caused performance issues making UTM solutions non feasible within environments that require consistent and high network throughput. The aforementioned situation has been responsible for UTM market to lose traction in large enterprises. Having understood the shortcomings with the technology, the vendors now are working towards offering customizing solutions in line with the needs of large enterprises. Presently, UTM centralized consoles are used across multiple branch offices of larger organizations, providing security for an entire infrastructure, eliminating the need to maintain each site or gateways separately, thereby reducing administrative costs and errors.
