Abstracts

The Europe Urinary Drainage Bags Market would witness market growth of 5.4% CAGR during the forecast period (2020-2026).

The swift increase in the geriatric population is the main factor that is responsible for the growing demand for urinary drainage bags. Numerous changes occur in the urinary system of an old person such as weakening of the bladder muscles, changes in the bladder wall, or blockage of the urethra due to debilitated muscle or in the size of the prostate gland in men. Urinary drainage bags have become a requirement in urinary drainage system infections and other health-related conditions. Additionally, the geriatric population also suffers from bladder control issues like urinary incontinence, leakage or retention, and Chronic Kidney Disease (CKD). Urinary retention is caused by neurological abnormalities, bladder neck obstruction, and the posterior urethral limit are the major concerns in the old age population.

Urine drainage bags collect urine and are mostly used in hospitals. This bag is designed in such a way that it is attached to a catheter (tube) or sheath that is put inside the urinary bladder of an individual. Urinary drainage bags are useful for the patients who are suffering from urine incontinence, urinary retention, gynaecological or urological surgeries where a patient is not able to move from one place to another and find it difficult to urinate or other health-related issues. A urinary catheter is positioned inside

the urinary bladder of the patients through the urethra. It is kept in the bladder with the help of a small, water-filled balloon.

The urinary drainage bags market is rising at a substantial growth rate, the main factors prompting the growth of the market are, a surge in urological problems, growing urinary infectious diseases, gynaecological and urological surgeries, increasing incidence of urinary incontinence, and an increase in the geriatric population.

Based on Product, the market is segmented into Leg Bags and Large Bags. Based on Capacity, the market is segmented into 500-1000 ml, 0-500 ml and 1000-2000 ml.
