The Europe Video Encoders Market would witness market growth of 3.7% CAGR during the forecast period (2017 – 2023). Video encoders, also known as video servers, are used in analog CCTV video surveillance systems for the integration with a network video system. Video encoders are pivotal in installations where analog cameras are to be maintained. A video encoder allows an analog CCTV system to seamlessly migrate to a network video system. The users can seamlessly use the existing analog equipment and enjoy the benefits of network video. Video encoders play a significant role in converting these analog systems to IP-based systems. Delivering media content to any connected device has grown to be a most crucial broadcast industry trend over the years and has led the broadcasters to transmit compressed high-quality content to ensure better streaming. The increasing demand for ultra-high definition (UHD) or 4K videos has driven the development of better encoders to transmit content over small bandwidths, driving the growth of video encoders technology within the broadcast applications.
