With the ongoing rise of identity theft and a company's willingness to securely assist client access information as quickly as possible, "voice biometrics" has appeared as a way to address these difficulties and secure client data. Voice biometrics can also be used alone to provide a reliable method of authentication via "voiceprints" or as part of a two-factor authentication process paired with something that the customer "knows" (such as a password or PIN) or "has" (such as a cell phone with a caller ID or credit card), to provide an additional layer of safety for sensitive data and financial transactions.

Voice biometrics Software provides several opportunities for countries which intend to invest in developing new technological features across various industries.
