Abstracts

The Europe Voice Picking Solution Market would witness market growth of 14.5% CAGR during the forecast period (2019-2025). Voice-directed applications provide numerous advantages over traditional order picking approaches, such as paper lists or wireless terminals. Instead of visually communicating through paper or computer monitors, Pick-to-Voice relies on headphone and microphone voice instructions. By releasing the operator's hands to handle the stock objects, Pick-to-Voice guarantees an ergonomic and effective picking sequence. Without removing the need to manage wireless data terminals and paper lists, the order picker can focus solely on collecting the required items. Alternatively, the directions and the responses from the picker are entirely by voice. Delays caused by the picker having to stop collecting things to enter data into a device are a thing of the past. With the current technology, procedures are streamlined and efficiency is increasing.

Voice-picking systems can enable real-time interaction between the warehouse management system as well as the distribution system. The use of voice-based technology will, in particular, help distribution centers increase reliability and efficiency, minimize employee training time and, eventually, optimize warehouse operations. As such, a voice picking solution can help warehouses increase sales, increase the number of customers served, and manage inventory efficiently. All of these factors are projected to make a significant contribution to facilitating the adoption of voice picking solutions and boosting market growth over the forecast period.
