Abstracts

The Europe Web Application Firewall Market would witness market growth of 16.1% CAGR during the forecast period (2017 – 2023). A Web application firewall (WAF) monitors, filters and blocks data packets while data travels to and fro within a Web application. A WAF could be network-based, host-based or cloud-based. It is generally deployed through a proxy and placed in between a client and web application. Running as a network appliance, server plug-in or cloud service, the WAF keeps a check on each of the packets and incorporates rule base to analyze Layer 7 web application logic and filter out traffic that is potentially harmful. Cloud based WAFs are easily deployable and available on subscription basis. The additional benefit is, the deployment of the technology is seamless and often requires only a simple DNS change to redirect application traffic. Though filtering an organization's web application traffic with a third-party provider could be challenging, nevertheless, the cloud based adoption allows applications to be protected across a broad spectrum of hosting locations and use similar policies to protect against application layer attacks.

Based on Deployment Types, the market report segments the market into On Demand and On Premise. Based on End Users, the Europe Web Application Firewall market segments the market into Ecommerce, BFSI, Government, and Others. Based on Countries, the Europe Web Application Firewall market segments the market into Germany, UK, France, Russia, Spain, Italy, and Rest of Europe.
