Abstracts

The Europe Workplace Transformation Market would witness market growth of 23.5% CAGR during the forecast period (2020-2026).

Workforce transformation requires a combination of investment in employees, processes and technology. It's not about concentrating on computers and a wide variety of applications, but rather about cultivating teamwork through simplification and agility with a laser focus. Additionally, it will meet the needs of all office personnel, remote employees and contractors. If effectively employed, the workplace transformation would draw top notch talent and reduce attrition. The results would result in lower operating costs, improved efficiency and increased competitiveness for organizations of any scale.

Technology alone can't help a company achieve digital transformation. The companies are trying implementing the technologies in ways that provide substantial opportunities to digital transformation. And their day-to-day perception in a digital workforce is at the

heart in employee engagement. If it is to be complete and systematic across the enterprise, people and their technology expertise must be the objective of any digital transformation.

The concept of digital transformation is not just about investments in the digital technology. Organizations can not anticipate changes to occur merely because they are adopting a new technology. Technology alone would inevitably struggle to live up to its full potential, without the help of an effective and secure digital workforce to fully support it. Organizations need to continue digital transformation from inside. After all, for a company to be able to harness the true power of technology, it needs a complete, organizational cultural change. And a complete transition is not feasible without the help of the employees.
