Abstracts

The Global Antibacterial Glass Market size is expected to reach \$328.1 Million by 2026, rising at a market growth of 10% CAGR during the forecast period. To control the bacterial and fungal spread on the surface, antibacterial glass being used progressively. It has been proved that its antimicrobial actions are effective against many bacteria like Staphylococcus Aureus, Pseudomonas Aeruginosa, and Escherichia Coli. To manufacture antibacterial glass, silver is used and alternatively, a combination of copper and zinc can also be used.

Silver is mainly used for manufacturing this glass because of its greater ability to interfere with chemical bonds present in bacteria and better antibacterial properties. Different forms of silver like silver nanoparticles, silver salts, and silver zeolite are used for microbial inhibition. These antimicrobial glasses are also used in the manufacturing of wall covering, defense equipment, touchscreen electronic goods, and hospitals.

It is expected that the increasing use of antimicrobial products in consumer electronics like tablets, phones, and phablets will encourage the antibacterial glass market in the coming days. The market growth may be hampered by high products price along with low market penetration. Regarding the manufacture of the antibacterial coating, the government has put strict rules that can act as a restrain.

To prevent bacteria-related diseases, there is an increasing demand for the use of antibacterial glasses in households. Places in the homes that are damp like bathrooms

and washrooms etc. are more prone to the growth of bacteria. With the rise in the living standard of urban population and disposable income, there is the increased use of antibacterial glass in homecare and this is the other factor that can fuel the demand of antibacterial glass in the global market.
