Artificial Intelligence is a fast-evolving technology and industry leaders are investing into the technology to gain higher market share within a competitive market space. The AI systems consist of software and also require high-end hardware functionality to support calculations. Therefore, market participants are working on building custom chips, designed to support AI development. Therefore, market participants are working on building custom chips, designed to support AI development. Google is the best example, where the company has designed an ASIC or application-specific integrated circuit, which is specifically used in deep neural nets, an AI technology that would revolutionize internet services. It is a network of hardware and software that is capable of learning specific tasks by analyzing vast data sets. Despite being a powerful technology, ASIC can only perform one function really well. Changing functions in ASIC would mean, redesigning another chip.
