Abstracts

The Global Aseptic Packaging Market size is expected to reach \$71.3 billion by 2023, rising at a market growth of 10.6% CAGR during the forecast period. Aseptic packaging is the last step in aseptic food processing, and with this form of packaging, food products are continuously sterilized, to ensure no microorganisms are in the food which would cause either food decay and/or food poisoning. Aseptic packaging ensures continuous sterilization and ensures the food inserted into the container is a completely sterile environment.

Aseptic technology helps in keeping the food safe, fresh and flavored for at least six months without refrigeration or adding preservatives. Food retains its colour, texture, taste and nutrition when packed aseptically. Growing urban population, demand for better packaging from the food and beverage sector and preference for convenient packaging are the factors that drive the demand for aseptic packaging market. Substantial initial capital would be a factor that would limit the market expansion during the forecast period.
