Abstracts

The Global Cancer Registry Software Market size is expected to reach \$90.8 Million by 2025, rising at a market growth of 10.33% CAGR during the forecast period. A cancer registry is an information system designed to collect, manage and analyze data on individuals diagnosed with the malignant or neoplastic disease (cancer). Free software applications are publicly available for collecting and analyzing cancer patients' related data. Cancer registry software offers in-depth information on state and global cancer statistics. To maintain records providing high-quality data, the National Program of Cancer Registries (NPCR) of the Centers for Disease Control and Prevention (CDC) offers support to nations and states. There are appointed registrars who need to manage and keep the registry updated.

Most of these cancer registrars are employed in hospitals. Other work settings and centers for registrars usually involve standard-setting organizations, government agencies, central or state cancer registries, pharmaceutical companies, staffing firms, software vendors, and insurance agencies. Moreover, various self-employed cancer registrars also exist in the industry. The National Cancer Registrars Association (NCRA), a non-profit association, includes registry professionals and Certified Tumor

Registrars (CTR).

The cancer registry program helps to simplify data collection for national and state registries, further helping to monitor the effectiveness of different treatment strategies. In addition, the data collected by the state registries help to better identify and treat the disease. The data collected are important to attack risk factors, like sun exposure, tobacco use, or certain environmental factors, including chemical and radiation exposure. Such information is also needed for places to be identified where screening and treatment services should be tracked and enhanced. In addition, registry data are useful for research institutes to estimate the efficacy of the cancer control, treatment, and prevention program.
