Abstracts

The Global Cartilage Repair Market size is expected to reach \$6.4 billion by 2024, rising at a market growth of 8.5% CAGR during the forecast period.

Growing epidemiology of such diseases need effective treatment options, driving the demand for regenerative medicine, which are used in restoring damaged cartilage. The growth of the cartilage repair market can be attributed to changing lifestyle, leading to a number of disorders such as obesity and degenerative joint diseases. The tissue prevents friction between the bones, by absorbing shock in the joints. When damage is caused in the cartilage, it restricts the regular movement of the knee, causing immense pain. It generally occurs after a traumatic and twisting injury to the knee. If cartilage damage remains untreated, it would lead to knee replacement surgery. The aforementioned factors have an influence on cartilage related injuries. These injuries eventually hamper productivity among the working population.
