Abstracts

The Global Data Center Switch Market size is expected to reach \$17.8 billion by 2023, rising at a market growth of 4.9% CAGR during the forecast period. . The factors driving the market growth are the ever-growing need for simplified data center management and automation, demand for cloud services, and growing inclination for internet multimedia content and web applications. Network switches can be categorized into 4 categories: those that fall within the classic three-tier enterprise network model, and newer data center-class switches which are now used by large enterprises and cloud providers, who rely heavily on virtualization. The newer switches have density and performance characteristics which make them perfect for the deployment across data centers or anchor a two-tier (leaf-spine) or one-tier flat mesh or fabric architecture. All switches come with similar basic functionality which includes maintaining a media access control (MAC) address-to-port table, used mainly to intelligently forward frames from the right ports to their intended destinations.
