The Global Data Resiliency Market size is expected to reach $25.8 billion by 2023, rising at a market growth of 17% CAGR during the forecast period. Resiliency is the ability of a server, network, storage system, or an entire data center, to recover quickly and continue operational functions when there is an equipment failure, power outage or other disruptions. Data resiliency supports data availability to various applications and end users, even in the instances of data failure in the hosted system. The adoption of disaster recovery services would eventually lead to successful recuperation of the data within a business continuity context. Therefore, investments into either private cloud disaster recovery solutions or both, private cloud and Disaster Recovery as a Service (DRaaS) are now a popular trend among the organizations.
