Abstracts

The Global Data Wrangling Market size is expected to reach \$2.8 billion by 2023, rising at a market growth of 17% CAGR during the forecast period. Data wrangling is used to transform and map data from one "raw" data form to another form to make data more appropriate and valuable in various activities such as analytics. Rapid growth in the volume of data generated across industry verticals has led to the adoption of advanced analytics algorithms to pick insights which could transform a business entity.

Unwillingness to shift from traditional ETL tools to advanced automated tools would be a major factor that would limit the growth of the market during the forecast period. Limited levels of awareness among SMEs, and concerns pertaining to data quality are the factors that would limit the seamless expansion of the market.
