## Abstracts

The Global Flat Panel Display Market size is expected to reach $178.4 billion by 2025, rising at a market growth of 6.8% CAGR during the forecast period. High demand for automotive display technology, increased demand for OLED display devices in smartphones and tablets, and increased adoption of interactive touch-based devices in the education sector boost the growth of flat panel display market. However, growing adoption of flexible flat panel display is expected to provide the industry with potential growth opportunities. However, it is expected that high costs of new display technologies and steady growth of desktop PCs, notebooks and tablets will restrain the growth of the market.

Flat panel displays are non-brittle, extremely thin, light and rough, and are powered by low power flow. Compared to conventional television sets, these benefits have made FPDs popular among consumers and drive the flat panel display market. Rapid growth in consumer electronics use, increasing technological advances in high-quality displays, lower display prices, and extensive applicability in the video games and entertainment industry are the main drivers for the growth of the demand for flat panel displays.

Based on Application, the market is segmented into Smartphone & Tablet, Television & Digital Signage, PC & Laptop, Vehicle Display, Smart Wearable and Others. High demand for automotive display technology, increased demand for OLED display devices in smartphones and tablets, and increased adoption of interactive touch-based devices in the education sector boost the growth of flat panel display market. However, growing adoption of flexible flat panel display is expected to provide the industry with potential growth opportunities. However, it is expected that high costs of new display technologies and steady growth of desktop PCs, notebooks and tablets will restrain the growth of the market.

In addition, display technology such as OLED has different advantages over conventional display technologies such as light weight and flexibility, enabling it to gain market advantage over other segments. OLED technology is regarded as a choice that is lighter and thinner than conventional LED and LCD systems. Therefore, OLED panels
