## Abstracts

Flour is used as a major ingredient in various food types and also in bakery items such as in cakes, breads, pastry, and others. Flour is a powder obtained by crushing grain. White flour, wheat flour, and rye flour are some of the varieties of flours available in the market. Flours are either bleached or unbleached. Unbleached flour is treated naturally, whereas; bleached flour is treated chemically by adding more chemical based ingredients to it. Bleached flour contains bleaching agents to speed up the flour's ageing process. Bleached flour includes different kinds of toxins such as Azodicarbonamide, Nitrogen dioxide, Bromate, Chlorine Dioxide, and others. The end result of the flours varies both in terms of color and texture.
