## Abstracts

The Global Handheld Imagers Market size is expected to reach \$3.7 billion by 2023, rising at a market growth of 17% CAGR during the forecast period. Increasing IT consumerization and development of advanced microbolometers has changed the landscape of application development. Significant levels of investments into developing camera-based scanners would contribute to the growth of the handheld imagers market. Camera-based solutions offer high price-performance ratio and also facilitate ease of use, offering market opportunities during the forecast period. Millimeter wave scanners use electromagnetic waves and it is used in detecting objects concealed under a person's clothing, and are majorly used in government buildings and airport security checkpoints. Microbolometers are used as detectors in thermal cameras, as these devices do not require cooling as other infrared detecting equipment such as a thermopile, Pyroelectric, MCT and InGaAs. Availability of low-cost microbolometers would have a significant impact on the market expansion during the forecast period.

Based on Application, the market report segments the market into Security, Industrial, Construction, Medical, and Others. Based on Product Type, the market report segments the market into Millimeter Wave Scanners, IR Scanners, Stud Finders, and Microbolometers.
