The Global Holter ECG Monitoring Market size is expected to reach \$511.7 million by 2024, rising at a market growth of 8.6% CAGR during the forecast period. A holter monitor is a compact-sized wearable device which is used in continuously monitoring or tracking hearts activity. Patients with cardiovascular diseases are recommended holter ECG test. The patient wears the holter monitoring devices for a day or two, and accordingly the hearts activities are monitored. Heart beats are monitored throughout the period when various activates are conducted. Aging population is highly susceptibility to cardiovascular diseases; therefore, is the key factor driving the market growth. Additionally, shifting focus from effective treatment to preventive care has further added to the adoption of holter ECGs across the healthcare ecosystem. However, lack of skilled professionals is a major factor restraining the market growth. Conversely, rise in demand for digital holter monitors among physicians and doctors would propel the market growth.
