Abstracts

Hyperspectral Imaging collects and processes the information across the electromagnetic spectrum. Hyperspectral Image provides much elaborated and detailed information about the scenario than any normal colour camera could provide. Hyperspectral Imaging Systems provide real time identification and detection. These systems are used in number of areas such as land, agriculture monitoring, eye care, food processing, mineralogy, surveillance, astronomy, chemical imaging, and life sciences & research. Hyperspectral imager also comes in the form of Hyperspectral Image Sensors, which provides three dimensional images of the object. Hyperspectral Imager is a new class of sensor that could provide three dimensional images of the object.

The report highlights the adoption of Hyperspectral Imaging Systems globally. Based on Application, the market is segmented into Military Surveillance, Remote Sensing, Machine Vision/Optical Sorting, Life Sciences and Medical Diagnostics, and Other Applications. Based on Component, the market is segmented into Hyperspectral Cameras and Accessories. The report also covers geographical segmentation of Hyperspectral Imaging Systems market. The geographies included in the report are North America, Europe, Asia-Pacific, Middle East and Africa. For the better analysis, the geographies are segmented into countries.
