Organizations have found the need to allocate access to applications and information distributed across internal and external application systems. The allocated access has to be leveraged to multiple levels of identities, existing both inside and outside the organization. The challenge is to allocate access without compromising on any level and at the same time ensure security of the applications and other critical data. Enterprises are highly inclined to enforce multiple channel user access such as social, cloud and mobile and at the same time cater to internal needs such as compliance & audit reporting, role management and integration of various user bases.

Emergence of cloud-based identity and access management solutions has contributed largely to the growth of the market. Stringent policies by government cyber authorities to protect data are another major factor driving the growth of identity and access management solution market. The demand is further enhanced due to growing cyber-attacks on organizations to gain access to confidential data. On the other hand, Complex integration process and compatibility issues would hinder the growth of the identity and access management market.
