Abstracts

The Global Internet of Things (IoT) Data Management Market size is expected to reach \$69.7 billion by 2023, rising at a market growth of 17% CAGR during the forecast period. Traditional data management systems are used to handle the storage, retrieval, and update elementary data items, records and files. However, within the context of IoT, data management systems must be able to summarize data online while providing storage, logging, and auditing facilities for offline analysis. Therefore, the traditional concepts don't hold good and the idea of data management from offline storage, query processing, and transaction management operations into online-offline communication/storage dual operations is expanded to a new level.

Based on Types, the market report segments the market into Solution and Services. Solution type includes Data Security Solution, Data Integration, Data Analytics & Visualization, Data Migration, Metadata Management, and others. Services type includes Professional and Managed.
