Abstracts

Machine vision system enables automatic analysis and inspection of the production line, imaging, process control, verification, measurements, robot guidance, and other functions. Machine vision is a full-fledged solution that works from acquiring an image to interacting with the management information system. Machine vision system is a very efficient system that almost negates the limitation caused due to human intervention and at the same time offer significantly high level of error recognition for a long period of time.

The machine vision system market is expected to witness significant growth during the forecast period, due to continued evolution of CMOS image sensors and rise in demand for automation in industrial applications. However, intensive training and education, an essential requirement to enable entry of machine vision in newer markets, would act as a major restraint for the machine vision system market growth. Nevertheless, the demand for miniaturization of machine vision system would offer lucrative opportunities for the market players operating in machine vision system market.

Based on type, the market is segmented into 1D, 2D, and 3D. Based on Component, market is segmented into Embedded system, Smart Camera, Lighting, Frame Grabber, and Lens. Based on Application, market is segmented into Verification, Identification, Measurement, Positioning, and Flaw Detection.
