## **Abstracts**

The Global Myomectomy Market size is expected to reach \$895.8 Million by 2026, rising at a market growth of 13.6% CAGR during the forecast period. Myomectomy is a medical-surgical procedure that is used in the removal of uterine fibroids. Uterine fibroids are medical conditions in which there is noncancerous growth in the uterus of females at their childbearing age, symptoms of this disease include heavy bleeding in the menstrual cycle, pain in the pelvis or lower back, more menstrual cramping, and swelling of the abdomen.

Increasing prevalence of uterine fibroids, and growing demand for diagnosis and treatment of the abdominal, urological, and uterine disorder. Moreover, increased demand for better medical devices for gynecology procedures is also fueling the growth of the market. Moreover, increasing healthcare expenditure and inclusive growth of healthcare industry is also influencing the market growth. Impressive and innovative research in the field of healthcare sectors including reproductive health is the main factor that is boosting the growth of the market. The progress of medical device industry and the growing adoption of technological advancements for developing novel medical devices also adding fuels the market growth across the globe. Though, the growth of the market is limited due to the fact that there is increasing competition among existing key players and the higher cost of these new medical devices.

Moreover, the adoption of advanced technologies and the introduction of novel products by the market players are anticipated to increase the market growth during the foreseeable period. For example, Intuitive Surgical has recently launched the Single Port Platform called “da Vinci SP Surgical System”. It allows doctors to get access to deep and narrow tissue during various urological procedures with robotic-assisted technology. As per the NCBI study report, approximately 30,000 myomectomy procedures are done annually for treating fibroids in the US. Thus, the increasing occurrence of uterine fibroids and urological problems has increased the adoption of myomectomy procedures all across the globe.
