The Global Network Traffic Analyzer Market size is expected to reach \$1.7 billion by 2023, rising at a market growth of 15% CAGR during the forecast period. Network traffic analyzer uses manual and automated techniques while reviewing granular-level data within network traffic. The process is used to gain in-depth insight into the kind of traffic/network packets or data which is flowing through a network. Network monitoring or network bandwidth monitoring software/application is used in the process of conducting traffic analysis. The enterprise network consists hundreds of network devices such as workstations, switches, routers, hubs, servers, virtual machines, firewalls, and various other network-related appliances. Managing and maintaining these devices need customized network traffic analyzer solutions, as the tools have the potential to deliver insights into the network traffic, bandwidth consumption, business applications, and protocol analysis. Various kinds of solutions are used in identifying breaches, detection, and mitigation of security attacks, and also allow better planning of network for the future.
