## Abstracts

Personal Identity Management (PIM) is the set of rules, standards and algorithms used by individuals and organizations to control the share and use confidential information with other individuals and organizations. As digital footprints of people are found across various media and channels, the companies with the capabilities to take advantage of the same are able to leverage this data to optimize their marketing strategies or use the footprints to verify and monitor applications. This is in a way invading the privacy of people and violating the fundamental rights of individuals. Such threat to privacy has given rise to the need for security solutions that allows users to manage digital footprints in different social media platforms. Personal identity management allows people to create policies that would give guidelines to organizations on the kind of data that can be stored. PIM acts as a shield when third party users try to gain access to private data and information without user consent. This step up of security allows better management of identities.
