Abstracts

The Global Power Tools Market size is expected to reach \$42.8 billion by 2026, rising at a market growth of 5.8% CAGR during the forecast period. Tools that are powered using a power source other than manual labor are referred to as power tools. These are used in various areas such as manufacturing and assembly lines, servicing and repair, packaging and DIY applications. Ease and quality of service, reduced time and labour costs, and convenient portability are some of the main factors driving demand for power tools across various industries.

Since power tools are supplied worldwide by a variety of machine suppliers to various sectors, such as automobile, aerospace, energy and control, shipbuilding and consumer electronics, the safety of power tools and regulatory enforcement are main concerns for manufacturers. Domestic and international distribution chains as well as end users, demand safety, reliability and strict compliance with current and evolving safety standards. It is also necessary for tool manufacturers to comply with these safety regulations.

In addition to compulsory legislation, suppliers must answer critical questions from retailers and customers regarding safety and environmental sustainability. Based on the particular type of equipment, additional legislation may address the physical safety standards, electromagnetic radiation, noise levels, chemical quality of products and

product recycling issues. In addition to compulsory requirements, added security testing results in an improvement in the cost of power tools. In order to comply with and promote existing trade policies, safety regulations are therefore a major challenge for manufacturers of power tools.
