Abstracts

Remote Patient Monitoring (RPM) Device also known as homecare Telehealth, is a technological device that are used for continually monitoring heart activity, blood pressure, pulse rate, body temperature and other patient related activities. These devices are also useful in inspecting the chronic diseases. The health professionals can examine their patients from the remote locations is one of the major breakthroughs in terms of healthcare advancements. To perform a routine test patient can use the mobile medical devices and can easily send the test data to their respective healthcare surgeon with the help of smartphones or computers.

Reduction in the cost of the hospitals stays, overcrowding in the diagnostic centres, and increase in the patient care are some of the key drivers of the Remote patient control market. However, shortage of skilled professionals, lack of Reimbursement guidelines and issues in device function can hamper the growth of the market. The National Telehealth Policy Resource Center says those who spend more time using remote monitoring had higher survival, those who did not use remote monitoring device; it clearly indicates that increased use of remote patient monitoring device could improve patient outcomes.

Based on the product, the Remote Patient Monitoring Devices market is segmented into Cardiac Monitors, Respiratory Monitors and Hematological Monitors. The Cardiac Monitors market is segmented into ECG Monitoring, Heart Rate Monitors, Fetal Heart Rate Monitor and Blood Pressure Monitors. Respiratory Monitors are further segmented into Respiration Rate Monitor, Spirometers and Sleep Apnea Monitor.
