## Abstracts

Self-organizing network is an intelligent mobile network software alternative that is responsible for complicated system functions to make sure smooth operating and superior network functionality. Additionally, it also makes it possible for continuous supervising of mobile network and associated solutions. The global SON market is anticipated to demonstrate reasonable advancement throughout the forecast period of time (2016-2022). SON gathers information from numerous networks sources and employs it to allow self-optimization, self-healing and self-configuration functions in network administration. SON fundamentally is designed to lessen network operator's efforts, by automating network administration functions. Self-organizing networks (SON) are the built to streamline and accelerate the structure, configuration, administration, optimization and healing of mobile communications networks. LTE and LTE-Advanced-based networks would be the first cellular based technologies which would take full advantage of the advancements. SON is integrated into various architectures such as distributed, centralized and hybrid, and is further divided into three functional categories such as self-configuration, self-optimization and self-healing.

The report highlights the adoption of Self Organizing Networks. The report also covers geographical segmentation of Self Organizing Networks market. Based on region, Self-Organizing Networks market is segmented into North America (US, Canada, Mexico and Rest of North America), Europe (Germany, UK, France, Russia, Spain, Italy and Rest of Europe), Asia-Pacific (China, Japan, India, South Korea, Singapore, Malaysia and Rest of Asia-Pacific) and Latin America, and Middle East & Africa.
