Abstracts

The Global Soundproof Curtains Market size is expected to reach \$2.8 billion by 2025, rising at a market growth of 7.3% CAGR during the forecast period. Soundproof curtains are made from materials like glass wool, rock wool, plastic foam, and natural fiber. Such fabrics help to significantly reduce the noise from the external environment. Such curtains consist of one or more layers of solid or thick material. In addition, the soundproof curtain layers consist of a loaded mass, a decorative fabric or a blanket, which is primarily used to soundproof commercial and industrial buildings.

Expansion of residential and non-residential construction activities around the globe is likely to increase demand for soundproof curtains due to the growing population. In addition, the rise in eco-friendly and sustainable construction is expected to fuel the growth of the market for soundproof curtains during the forecast period. Rising infrastructure spending across developing economies, like China, Indonesia, India, South Korea, and others, is expected to benefit market growth. In addition, increased government spending in the reconstruction and refurbishment of the construction sector in regions including North America and Europe is projected to fuel demand for products.

Stringent government legislation on noise pollution is projected to be the main driver of the soundproof curtains market. In addition, the proliferation of digital media is expected to further result in a growing awareness of technologically advanced and innovative products available across the market. This is expected to eventually fuel the growth of the soundproof curtain industry.

The escalated demand for soundproof products and audio panels is expected to replace soundproof curtains, which might challenge market growth over the forecast period. Nevertheless, the existence of raw materials for soundproof curtains at a lower rate, combined with ongoing technological advances in manufacturing processes, is expected to intensify market demand.

Based on Type, the market is segmented into Sound-Insulating, Sound-Reducing and Sound-Blocking. Based on Material Type, the market is segmented into Glass Wool, Plastic Foams, Rock Wool and Natural Fibers.
