Video analytics software came into existence to review videos and identify useful incidents from the surroundings. The otherwise difficult task of watching videos is made easy with video analytics software and as a result efficient out can be expected from the same. Video analytics makes the surveillance system more efficient, reduces workload on security and management staff, and helps in capturing the full value of security video by making the IP camera system more intelligent. Video analytics software for security cameras is available in several forms, namely installed on camera, on NVR, or as 3rd party software. Every form of video analytics solution works in a different manner, and it would depend on the manufacturer and the application itself. Nevertheless, it is possible to set up the application to certain parameters such as to the activity the software is looking for, set up the alert notification system, and raise alarms when criteria are met.

Based on Component, the market is segmented into Software and Services. Services are further divided into Professional and Managed. Based on Application, the market is segmented into Intrusion Management, Incident Detection, Traffic Monitoring, People/Crowd Counting, Facial Recognition, Automatic Number Plate Recognition, and Other Application.
