## Abstracts

The Global Wireless audio devices are used to transmit and receive audio signals by means of wireless technologies such as Wi-Fi, Bluetooth, and AirPlay. Wireless headphones, microphones, speakers, sound bars, audio systems, radio tuners, etc. are some of the different types of wireless audio devices available in the market. Growing penetration of infotainment devices, rising adoption of mobile devices, and growing application areas of wireless audio devices in the commercial sector such as events, shows, call centers, and others are the key driving factors for the market. Stringent government regulations have been imposed on the acceptable frequency range for audio devices, as the use of these devices at more than 85 decibels (dB) for 8 hours or more could have an adverse impact on the hearing ability of users. The adverse impact on the users would be a factor that would hinder the market growth.
