Abstracts

The Global Wound Management Devices Market size is expected to reach \$21.6 billion by 2026, rising at a market growth of 7.2% CAGR during the forecast period. Wounds can occur due to accidents, burns, trauma, or natural disasters. They are commonly grouped into two kinds, i.e. chronic and acute wounds. Chronic injuries may emerge because of different types of life illnesses, for example, obesity, cardiovascular diseases, and diabetes. While on the other hand, acute wounds can occur due to surgical or traumatic incidents. These wounds usually cure through an ordinary wound healing process at a reliable rate. However, the number of chronic wounds affect is anticipated to increase in the coming years.

The wound management products are available in the market to treat problematic wounds. Billions of people around the world are suffering from wounds and injuries. The products have been formulated to ensure high resistance to environmental inhibitors and foreign particles. They are mainly used by a nurse under the physicians' guidelines and supervision. Accordingly, the increasing rates of cost-efficient treatments are driving the demand for better wound care products.

In the current scenario, there are tremendous innovations in Pharmacology. Some of the pharmaceutical agents like angiotensin-converting enzyme (ACE) inhibitors,

monoclonal antibodies, topical immunosuppressants, and xanthine oxidase inhibitors have been undertaken in wound care treatment. An agent like ACE inhibition has helped in improving the walking ability and quality of life in patients with peripheral arterial disease, a common circulatory problem, and positively impacted wound healing.

The global wound care devices present in the market anticipated to witness gradual progress in the forecast period. The steady growth rate is primarily because of the COVID-19 outbreak which leads to the supply and demand mismatches of resources. There is insufficient production of wound dressing products and wound healing devices due to the limitation imposed by governments of various countries. However, the shutdown of factories or limitations of working with less staffing was imposed to lower the spread of the virus and keep the staff safe. The segment accounted for the majority of the share and is projected to expand at the fastest CAGR in the forecast period.

Based on Product, the market is segmented into Therapy Devices, Wound closure Devices and Other Products. Based on Application, the market is segmented into Burns, Pressure Ulcers, Diabetic Foot Ulcers, Surgical Wounds and Other Applications. Based on End User, the market is segmented into Clinics, Hospitals and Other End User. Based on Regions, the market is segmented into North America, Europe, Asia Pacific, and Latin America, Middle East & Africa.
