Abstracts

The Latin America, Middle East and Africa 3D Metrology Market would witness market growth of 12.5% CAGR during the forecast period (2019-2025). The reverse engineering market for 3D metrology is anticipated to develop at a high pace from 2019 to 2025. Industries such as automotive, aerospace & defence, and manufacturing have begun using 3D metrology to modify the design of real objects to generate customized cars, spare parts, and components that had been discontinued in production. The main drivers of the reverse engineering industry in 3D metrology are high accuracy, faster product evaluation and the capacity to make improvements in the initial product.

For most in the field of accuracy measurement, mining activities are challenging environments. The older, more traditional mechanical techniques are restricted in the quantity they can cover and strongly rely on the operator's ability level. Revolutionary and mobile 3D metrology solutions like laser trackers make it much quicker and more efficient and traceable to inspect and align mining equipment than traditional techniques. Several mining applications benefit from using a laser tracker, such as inspection, alignment and reconstruction of conveyor idlers, pulleys and bearings. The laser tracker is also perfect for checking and aligning big rotating devices like railcar dumpers as well as ball mills and transmission of energy to this equipment.
