Abstracts

The Latin America, Middle East and Africa 3D Projector Market would witness market growth of 8.7% CAGR during the forecast period (2019-2025). Using display technologies such as DLP and 3LCD, 3D projectors are built like 2D projectors. However, in a multitude of formats, 3D projectors obtain and project a distinct sort of data stream. Four significant formats are used to transmit 3D videos: frame sequential, side by side, frame packing, and checkerboard. Supported transmission format is the criterion for separating 3D projectors into two groups: full 3D projectors and 3D-ready projectors.

The benefits of projectors in this regard are twofold when it comes to the comfort of an eye. Everyone who has ever taken an eye exam already understands that it is always simpler to read the bigger letters than the smaller ones, even if the person has the best possible eyesight. Well, the same principle applies to projector-related eye comfort. Projectors appreciate the inherent benefit of bigger screen sizes compared to televisions. Just as it is simpler to read bigger letters, so it is also simpler for the eyes to see a bigger screen than a small one.

Cinepolis has extended its circuit as Latin America's largest cinema chain and the fourth largest in the globe to run nearly 4,000 screens with Barco projection technology. Cinepolis chosen Barco as its exclusive digital cinema projector partner and later became Latin America's first exhibitor to introduce laser projection to moviegoers deploying Barco's DP4K-60L at MexicoCity's Cin?polis Parque Tereo. Cin?polis was also the first to take Barco Escape to Latin America, demonstrating once again that they are highly focused on achieving their mission to provide customers with the recent technology in movie entertainment.
