Abstracts

The Latin America, Middle East and Africa Airway Clearance System Market would witness market growth of 5.7% CAGR during the forecast period (2019-2025).

The Flutter mucus clearance tool, combining PEP therapy with high-frequency oscillation, is a guided stimulation system that gently oscillates the airways in the lungs, large and small. These oscillating devices produce sensations as a person exhales. The action helps remove the mucus from the bronchial walls while speeding up airflow to further facilitate the clearance of mucus. The patient would normally cough out the accumulated mucus after having blown through the system several times.

As part of their normal airway clearing routine, many people with cystic fibrosis (CF), bronchiectasis (BE) and other respiratory disorders use high-frequency chest wall oscillation (HFCWO) vests. High-frequency chest wall oscillation (HFCWO) is an airway clearing technique that uses a modified vest to administer external chest wall

oscillations to the torso. These vests create vibrations at varying frequencies and intensities to help release and thin mucus and remove it from the walls of the airway in order to cough it up.

It is important to consider the complexities of chronic lung disease such as bronchiectasis in order to determine the appropriate treatment strategy for your particular symptoms. Bronchiectasis is a permanent lung disease that can damage the airways and impair the capacity to clear mucus, from shortness of breath to a chronic cough that produces mucus. Clearing mucus from the lungs using a combination of medicine and airway clearing procedures will enhance symptoms for patients living with bronchiectasis and reduce risks of impaired airway clearing.

Based on Type, the market is segmented into Positive Expiratory Pressure (PEP), Mechanical Cough Assist, High Frequency Chest Wall Oscillation (HFCWO), Oscillating PEP devices and Intrapulmonary Percussive Ventilators. Based on Application, the market is segmented into Cystic Fibrosis, Neuromuscular, Bronchiectasis, Emphysema and Other Applications. Based on End Use, the market is segmented into Home Care Settings, Ambulatory Surgical Centers, Hospitals & Clinics and Other End Use.
