The outbreak of COVID-19 has a big impact on the economy as many non-essential businesses got temporarily closed from the first quarter of 2020. In the future to fight with similar kinds of diseases, it is expected that the government of many countries will spend to increase their healthcare facilities. And this will increase the demand for infrastructure products including antibacterial glass.

Houses and apartments are also exposed to disease-causing microorganisms like bacteria and fungi. Bacteria like salmonella, staphylococcus, and Escherichia coli causes harm to the human body. These bacteria get transmitted from contaminated surfaces like kitchen tops, furniture, and household equipment and dining tables. So, in bathrooms, showers, doors, windows, and household equipment, antibacterial glass can be used to prevent the spread of infections by bacteria.

Nowadays, the advancement in research, testing, and manufacturing has gathered from deep experience with glass. Antimicrobial glass cover fulfills the demands of microbe elimination and the performance of touchscreens. The glass has been used in a wide variety of industries since its introduction in the market especially those industries that involve in touchscreen manufacturing. Healthcare, banking, hospitality, and other sectors are also focusing on designing and producing devices that have antimicrobial
