Abstracts

The Latin America, Middle East and Africa Coated Endotracheal Tube Market would witness market growth of 8.4% CAGR during the forecast period (2018 – 2024).

Endotracheal tube is a metal or plastic tube that is introduced in the trachea via the mouth or nose to validate the adequate exchange of oxygen and carbon dioxide and at the same time maintain the patient's airway. Coated endotracheal tube is a specific tube coated with antithrombotic agents that is used to prevent coagulation or antibiotic agents such as polyvinyl chloride, silver, and various drugs to limit the growth of the bacteria on the surface of endotracheal tube. Endotracheal tube needs to be replaced on a regular basis; therefore, it causes excessive discomfort to patients. To prevent frequent replacements, tubes are therefore, treated with antibacterial agents. Growing number of surgical procedures due to increasing chronic respiratory diseases such as cardiovascular diseases, respiratory diseases, diabetes, cancer, and other lung injuries are the factors that contribute to the growth of the market. Moreover, growing need for ventilator associated pneumonia and growth in geriatric population, that is highly prone to chronic diseases also significantly contribute to the market growth. On the other hand, the development of novel products by market leaders, mainly to avoid ventilator-associated pneumonia (VAP) condition by preventing bacterial colonization and biofilm formation on tube surface and large potential of emerging economies, would be factors that offer market opportunities.

Based on End user, the market is segmented into Hospitals, Clinics and Ambulatory Surgical Centers.
