Abstracts

The Latin America, Middle East and Africa Colposcopes Market would witness market growth of 6.5% CAGR during the forecast period (2020-2026).

The size of the market for colposcopy is projected to see substantial growth owing to the growing incidences of cervical cancer across the globe. The main use of colposcopy is identifying precancerous tissues to avoid cervical cancer. According to the World Health Organization (WHO), cervical cancer is listed as the world's second-most common cause of death from cancer in women.

The cancer burden is rising among women in both high-income (HIC) and low- and middle-income (LMIC) countries owing to shifts in the prevalence of cancer risk factors as countries experience economic transformation. The major risk factors include changing patterns of lifestyle, smoking, physical inactivity, excess body weight, and changes in reproductive patterns such as late first birth, as well as fewer births. Therefore, a higher prevalence of cervical cancer due to the above-mentioned factors will drive colposcope market growth worldwide.

Cervical cancer is most commonly diagnosed in women between the ages of 35 and 44 with an average age being 50 at diagnosis. It only occurs in females below 20. A lot of older women do not realize that there is still a risk of developing cervical cancer as they age. Screening involves screening for cancer before a person has any symptoms. This will help detect cancer at an early level. If abnormal tissue or cancer is found early, it may be easier to treat. When symptoms appear, cancer may have begun to spread.

Scientists are seeking to understand better which population segment is more likely to get other forms of cancer. They even research the things that a person does and the things that affect them and see whether certain habits or routine causes cancer. This information helps doctors recommend who should be screened for cancer, what screening tests should be used, and how often the tests should be performed.

Based on Application, the market is segmented into Cervical cancer screening and Physical examinations. Based on Product, the market is segmented into Portable, Handheld and Stationary. Based on countries, the market is segmented into Brazil, Argentina, UAE, Saudi Arabia, South Africa, Nigeria, and Rest of LAMEA.
