## Abstracts

The LAMEA Dental Cement Market would witness market growth of 7.4% CAGR during the forecast period (2019-2025). The LAMEA Dental Cement market is studied across the Brazil, Argentina, UAE, Saudi Arabia, South Africa, Nigeria and Rest of LAMEA. Dental amalgam, dental adhesive and cement, dental composites and light-curing, dental ceramic and new functional repair materials have made huge progress over the past couple of decades. The developments can be attributed to their influence on the profession and oral health of literally millions of dental patients. Well-adapted dental composites are supposedly designed to discourage or prevent the leakage or penetration of salivary. Early observations of adherence in wet environments for things like mussels have spurred optimism for successful conformity to dentistry.

The market is classified as permanent and temporary based on type. Due to various features, like insoluble oral fluids, high resistance, and good dental compatibility, the permanent cement segment remained dominant in 2018 and is anticipated to see profitable growth over the forecast period.

Furthermore, permanent dental cement is produced of long-lasting components that are wear-resistant and have a durability of at least 10 years up to a maximum of 30 years. They offer marginal sealing of quality and help prevent leakage and provide optimal protection against external dental tissues.

As they have a decent hold on dental restoration and teeth, temporary cementation is also expected to grow steadily. Also, when required, they can be easily removed in the future. Patients at first prefer temporary cementation for these reasons. Moreover, many dentists also chose temporary cementation to inspect the margins and contours of restoration to evaluate the adaptation of dental tissue to new material and also to assess the performance of the restoration.

The dental cement market of materials has been divided into polycarboxylate, zinc phosphate, zinc oxide eugenol, glass ionomer, resin-based, and others. The resin-based segment recorded the largest market share in 2018 and over the forecast period is expected to grow at a rapid pace. One of the most versatile dental cement is cement-based on the resin. The company has various useful properties, like thin film thickness and water insolubility, leading to an increased usage of metal castings, resin or ceramic inlays, orthodontic bands & brackets and ceramic veneers for cementation.

The report highlights the adoption of Dental Cement in Europe. Based on Material, the market is segmented into Zinc-Oxide Eugenol, Polycarboxylate, Zinc Phosphate, Glass Ionomer, Resin Based and Other Materials. Based on Application, the market is segmented into Pulpal Protection, Luting, Restorations and Surgical Dressing. Based on Category, the market is segmented into Permanent and Temporary.
