## **Abstracts**

The Latin America, Middle East and Africa Food Preservatives Market would witness market growth of 4.9% CAGR during the forecast period (2017 – 2023). Food preservatives are added during food processing to improve stability and at the same time avoid spoilage. Though there are wide ranges of preservatives, very few are used during processing of food. Traditionally, salts, sugar, and spices are largely used in the preservation of meat and other food types. Food preservatives prevents the growth of microorganisms, and as a result, inhibit or delays the process of food spoilage. Food preservatives are classified into non-toxic and moderately toxic. Factors such as change in customer lifestyle, exponential growth in the imports and exports, growing demand for fresh and high-quality edibles, and affordability and willingness of consumers to pay premium price have promoted the market for food preservatives.

Based on Component Type, the market report segments the market into Natural and Synthetic. Natural Type includes Edible Oil, Rosemary Extracts, Natamycin, Vinegar, and Others.
