Abstracts

The Latin America, Middle East and Africa Fusion Biopsy Market would witness market growth of 12.3% CAGR during the forecast period (2020-2026).

The growing incidence of prostate cancer, increasing adoption of multiparametric MRI in prostate cancer treatment and care along with greater specificity of fusion biopsy are some of the factors that are expected to drive the targeted MR/Ultrasound biopsy system demand in the coming years. According to several studies, the success rate of prostate biopsy combined with traditional core biopsy is about 33%, while the MR/US fusion biopsy has the success rate ranging from 58-70%. Thus, the need for a repeat biopsy is eliminated by fusion biopsy and therefore minimizes additional healthcare costs and patient discomfort.

At times, it is hard to detect prostate cancer and fusion biopsy is very beneficial in this. The Fusion Biopsy System Market is likely to grow globally at a significant CAGR in the forecast period because of the fact that the scope, product types, and applications of these products are continuously increasing across the globe. A Fusion biopsy system combines MRI ultrasound along with biopsy system for a better view. Fusion biopsy is also termed as fusion guided biopsy. Moreover, biopsy infers taking the tissue sample from the body then examines the report and detect it in the best possible manner. When test previously done in case of any prostate related problems and if that test shows an anomaly in certain areas of the sample; then doctors recommend for biopsy.
