Abstracts

The Latin America, Middle East and Africa Infant Phototherapy Devices Market would witness market growth of 6.4% CAGR during the forecast period (2018 – 2024). Phototherapy is widely used in minimizing bilirubin (the compound that leads to jaundice) levels in infants. The infant is made to lie in a plastic crib, exposing the infant to a type of light which is absorbed by the infant. With this process, the bilirubin in the infant's body gets converted into a much simpler water-soluble form which is easily excreted through stool and urine. Growing prevalence of neonatal jaundice, effective phototherapy treatment, and technological advancements in the field of infant phototherapy are the factors that drive the global infant phototherapy devices market. However, side effects related to the use of phototherapy treatment would limit the market growth

Based on Configuration, the market is segmented into Mobile Device and Fixed Device. Based on Light Source, the market is segmented into Light-Emitting Diodes (LEDs), Fluorescent Lamps (FL), Quartz Halogen Lamps and Gas Discharge Tubes. Based on End User, the market is segmented into Hospital and Neonatal Clinics. Based on countries, the market is segmented into Brazil, Argentina, UAE, Saudi Arabia, South Africa, Nigeria, and Rest of LAMEA.
