## **Abstracts**

The Latin America, Middle East and Africa Intra-abdominal Pressure Measurement Devices Market would witness market growth of 12.2% CAGR during the forecast period (2020-2026).

Patients in the Intensive Care Unit (ICU) are at risk of contracting intra-abdominal hypertension (IAH) and abdominal compartment syndrome (ACS). Nevertheless, efficient management of IAH and ACS will reduce the duration of ICU stays, which in turn will minimize spending on healthcare.

Acute compartment syndrome develops when the strain inside the closed osteofascial compartment is elevated and local circulation is compromised. Acute compartment syndrome is considered a surgical emergency because it can lead to ischemia and eventually necrosis without proper treatment. Acute compartment syndrome is generally considered to be a clinical diagnosis. However, intracompartmental pressure (ICP) > 30 mmHg may be used as a diagnostic threshold. However, a single typical reading of ICP does not exclude acute compartment syndrome.

Fascia is a thin, inelastic sheet of connective tissue that surrounds the muscle compartments and reduces the capacity for rapid growth. There are four muscle compartments in the leg: anterior, lateral, deep posterior, and superficial posterior. The anterior leg compartment is the most specific compartment syndrome location. This compartment comprises of the extensor muscles of the toes, the anterior tibial muscle, the deep peroneal nerve, and the tibial artery. Other locations where acute

compartment syndrome is seen include forearm, thigh, buttocks, shoulder, hand, and foot. It can also be seen in the abdomen but is usually found in the limbs. Acute compartment syndrome arises due to reduced intracompartmental space or increased intracompartmental fluid pressure as the surrounding fascia is necessarily non-compliant. When the pressure of the cavity increases, hemodynamics becomes impaired. Normally, there is a balance between venous outflow and arterial inflow.

Based on Product, the market is segmented into Equipment and Disposables. Based on Procedure, the market is segmented into Abdomen and Muscle. Based on Application, the market is segmented into Intra-abdominal Hypertension and Intra-compartment Pressure. Based on countries, the market is segmented into Brazil, Argentina, UAE, Saudi Arabia, South Africa, Nigeria, and Rest of LAMEA.
