Abstracts

The Latin America, Middle East and Africa Liver Disease Diagnostics Market would witness market growth of 7.6% CAGR during the forecast period (2020-2026).

Increasing the prevalence of the liver disease has made it important to increase awareness. Government and non-profit organizations play a vital role in a growing understanding of liver disease around the world. These organizations promote awareness of liver-related diseases and support research and development in the prevention, treatment, and cure of liver disease.

In underdeveloped countries, however, the presence of an unmet clinical need for liver disease is likely to fuel the demand for diagnosis and treatment of liver disease. In addition to that, the rise to people's disposable income is projected to further expand the demand because they become more inclined to invest freely in advanced treatment. Furthermore, the growing acceptance of unhealthy lifestyles is described as a core factor of growth for liver disease diagnostics and treatment.

Liver disease in the United Kingdom has increased dramatically, particularly in people under 65 years of age — a marked contrast to all other major causes of death that have decreased in younger age groups. The epidemic was caused by alcohol, obesity and hepatitis C. LFTs are usually abnormal due to a number of causes, such as drinking too much, fatty liver due to obesity, infections, rare liver diseases, and certain cancers — but they may be a symptom of potentially fatal liver disease.
